Group P

2022-09-27

This is a team assignment; each team should complete and turn in a PDF created from an Rmd via Github. Please include code and output for the following components:

Description of data set 1. What is the data source? (1-2 sentences on where the data is coming from, dates included, etc.)

Data on monkey pox cases in the EU/EEA is accessible at: <https://www.ecdc.europa.eu/en/publications-data/data-monkeypox-cases-eueea>

2. How does the data set relate to the group problem statement and question?

The data set is going to help us understand how monkey pox case rates may differ by region and various demographic factors, additionally, the data set will allow us to determine if there is a relationship between certain demographics and monkey pox case rates.

Import statement NOTE: Please use data sets available in the PHW251 Project Data github repo Links to an external site. (this is important to make sure everyone is using the same data sets)(done) Use appropriate import function and package based on the type of file(done) Utilize function arguments to control relevant components (i.e. change column types, column names, missing values, etc.)(working on it) Document the import process(working on it)

Identify 5+ data elements required for your specified scenario. If <5 elements are required to complete the analysis, please choose additional variables of interest in the data set to explore in this milestone.

confirmed cases, sub_region, time period, age, education and sex

Identify the desired type/format for each variable—will you need to convert any columns to numeric or another type?

Provide a basic description of the 5+ data elements Numeric: mean, median, range
